

SOLANA · NON-CUSTODIAL · FIXED SUPPLY

FutureBit Staking

FBiT · SPL Token on Solana Mainnet

Stake FBiT and earn dynamic Proof-of-Stake rewards, build a 10-level referral network with a recurring claim-time layer on top, and unlock Team Target Bonuses. Or provide single-sided SOL liquidity and earn trading fees — all on-chain, all verifiable.

NON-CUSTODIAL

futurebit.in

FutureBit Staking (FBiT) is an independent Solana DeFi protocol — not affiliated with FutureBit LLC's Bitcoin mining hardware.

OVERVIEW

What Is FutureBit Staking?

FutureBit Staking is a non-custodial DeFi protocol on Solana built around the FBit token. Stake FBit to earn dynamic Proof-of-Stake rewards that adjust automatically with total tokens staked, refer new stakers for on-chain commissions up to 10 levels deep, and grow your team's stake to unlock extra bonus tiers — all without ever giving up custody of your tokens. A separate Liquidity feature also lets you deposit single-sided SOL to earn trading fees on the FBit/SOL pool.

Token Name	FutureBit
Symbol	FBit
Network	Solana Mainnet
Standard	SPL Token
Total Supply	250,000,000 FBit
Decimals	9
Mint Authority	Renounced
Liquidity	100% locked / burned
Platform Fee	0.25% (stake / claim / compound / unstake)
MINT ADDRESS (VERIFY ON SOLSCAN)	
5uJ8rkiqEs5uzERCqVw9a1eC6BkP54MZAF3D229dyoME	

HOW IT WORKS

Everything Runs On-Chain

 Built on Solana Fast finality and low fees — stake, claim, and compound without heavy gas costs.	 Dynamic PoS APY APY adjusts automatically with total staked — fully on-chain and transparent.	 10-Level Referrals Earn commission up to 10 levels deep — up to 17.75% total, paid automatically.
 Team Target Bonus Grow your team's total stake to unlock extra bonus tiers on top of base APY.	 Deflationary Burn A portion of every claim/compound is burned on-chain, permanently reducing supply.	 Non-Custodial Your tokens never leave your wallet. No KYC, no sign-up required.

GETTING STARTED

Stake in Four Steps

No sign-up, no KYC — just a Solana wallet. Every step below happens directly between your wallet and the smart contract.

1

Connect your wallet

Visit futurebit.in, click "Launch App," then "Connect." If someone referred you, enter their wallet address — it only works if they've already staked themselves, and it's saved on-chain permanently.

2

Enter an amount and stake

Open the Stake tab, enter how much FBit to stake (minimum 0.1 FBit), review the current dynamic APY and the 30-day lock period, and confirm.

3

Claim or compound every 6 hours

Rewards accrue continuously and become claimable every 6 hours. Claim to your wallet, or compound them back into your stake to grow it faster.

4

Unstake anytime after 30 days

Once the lock period ends, withdraw your full principal plus any unclaimed rewards in a single transaction.

CLAIM INTERVAL

5%

BURN PER CLAIM

Burn is 5% of the after-fee reward, always. Up to another 5% may also burn if part of your claim-referral chain (see next page) isn't active — that unfilled share splits 50/50 between extra burn and you, it's never simply pocketed by the platform.

TOKENOMICS

250,000,000 FBiT — Fixed Forever

Mint authority renounced on-chain. No new tokens can ever be created.

ONE-TIME REFERRAL (ON STAKE)

10-Level Referral Program

Paid instantly from the reward pool the moment your referral stakes — the first of two separate referral layers (see the next page for the second).

10-Level Referral Program

17.75% total

Level 1		0.25%	Level 6		2.00%
Level 2		0.50%	Level 7		2.25%
Level 3		1.25%	Level 8		2.50%
Level 4		1.50%	Level 9		2.75%
Level 5		1.75%	Level 10		3.00%

Team Target Bonus

up to +10% APY

Bronze +2% 50K	Silver +3% 100K	Gold +4% 250K	Platinum +5% 500K	Diamond +6% 1M
Ruby +7% 2.5M	Emerald +7.5% 5M	Sapphire +8.5% 10M	Obsidian +9% 20M	Titan +10% 100M

A Second, Recurring Referral Layer

Separate from the one-time 10-level program on the previous page, every claim and compound also pays your direct referral chain up to 5 levels deep — not once, but every single time you claim. It's carved entirely out of that claim's own reward, never drawn from the pool beyond what the claim already costs it, so it can't shorten the emission reserve's runway.

Funded from	The claiming user's own after-fee reward
Requirement to be paid	Referrer must already have an active stake
If a level can't be paid	Its share splits 50/50 — half burns, half returns to you
Net to you (full 5-level chain)	~85% of your after-fee reward
Net to you (no active referrer)	~90% of your after-fee reward

WORKED EXAMPLE

1 FBit Gross Reward, No Active Referrer

- 0.25% platform fee**
0.0025 FBit to feeRecipient — 0.9975 FBit remains.
- ~10% total burn**
~0.0997 FBit burned — the base 5%, plus the unpaid referral chain's burn half.
- You keep the rest**
~0.898 FBit lands in your wallet (or compounds into your stake).

LIQUIDITY

Deposit SOL, Earn Trading Fees

Deposit only SOL — no FBiT needed upfront. Half is automatically swapped to FBiT and both halves are added as a locked liquidity position on the live FBiT/SOL pool. Your position keeps earning real trading fees the entire time it's locked, and you can claim or compound those fees whenever you like.

Pool	Meteora DAMM v2 (FBiT/SOL)
Deposit Fee	0.2 SOL
Withdraw Fee	0.5 SOL
Withdrawal Payout	Always SOL (auto swap-back)

LOCK SCHEDULE

Longer Locks for Larger Deposits

A Permanent lock — principal never withdrawable — is always available too, at any deposit size.

DEPOSIT SIZE	LOCK PERIOD
1 - 10 SOL	12 Months
10 - 50 SOL	24 Months
50 - 100 SOL	36 Months
100 - 250 SOL	48 Months
250 - 500 SOL	60 Months
500+ SOL	72 Months

HOW IT WORKS

Four Steps, Two Wallet Approvals

- 1 Deposit SOL**
Choose an amount and your lock type (tier-based, or Permanent) in the Liquidity tab of the app.
- 2 Auto-swap & lock**
Half your SOL swaps to FBiT via Jupiter; both halves are added as an LP position and locked on-chain by Meteora — not by us.
- 3 Claim or compound fees**
Trading fees accrue while locked. Claim them to your wallet, or compound back into the position — anytime, even before unlock.
- 4 Withdraw as SOL**
After your lock period ends, remove liquidity and receive everything back as SOL — the FBiT leg is auto-swapped back for you.

Built to Be Trusted
